Education

National Cheng Kung University **Tainan, Taiwan**
B.S. in Computer Science and Information Engineering (early graduation) — GPA: 4.03 / 4.30 *Sep. 2022–Jan. 2026*

Publications & Manuscripts

1. **SCURank: Ranking Multiple Candidate Summaries with Summary Content Units for Enhanced Summarization**
   Bo-Jyun Wang, Ying-Jia Lin, and Hung-Yu Kao
   Findings of ACL 2026 (presented in San Diego, CA). [Paper]
2. **Beyond KL? Disentangling Distillation Signals in Encoder-Decoder Models for Summarization**
   Bo-Jyun Wang and Ying-Jia Lin
   Submitted to ACL Rolling Review, Oct. 2026.
3. **Integrating Harmonization with 3D-CNN Improves Multi-Site MRI Classification**
   Bo-Jyun Wang and Hui-Ling Chan
   iFUZZY 2025 (presented in Hsinchu, Taiwan).

Research Experience

Research Assistant **Feb. 2026–Present**
AI Research Center, Chang Gung University (Advisor: Prof. Ying-Jia Lin; Center PI: Kwei-Jay Lin) *Taoyuan, Taiwan*

Trajectory Geometry Alignment (TGA)

- Developing **TGA**, a differentiable dissimilarity between the full-depth, per-token representation trajectories of two models.
- Formulating it with fused Gromov–Wasserstein over inter-layer distances and a soft layer-position cost to accommodate different model depths and widths; evaluating it as a distillation loss for instruction following.

Beyond KL

- Conducted a 2^4 factorial study of four auxiliary distillation signals for encoder–decoder summarization (2 datasets, 3 teacher–student pairs, 3 seeds per setting), applying main-effect, Shapley-value, and interaction analyses with paired-bootstrap uncertainty estimates.
- Found that no auxiliary signal consistently outperformed KL-only: the proportion of G-Eval comparisons favoring auxiliary configurations fell from 33.3% (one added signal) to 8.3% (all four). Attention signals tended to lower LLM-judged quality; across all metrics, 526 of 528 setting-specific interaction estimates had 95% CIs that included zero.

Undergraduate Researcher **Feb. 2024–Jan. 2026**
IKM Lab, National Cheng Kung University (Advisor: Prof. Hung-Yu Kao; mentor: Ying-Jia Lin) *Tainan, Taiwan*

- Proposed **SCURank**, which ranks multi-teacher candidate summaries for contrastive distillation by decomposing them into Summary Content Units (SCUs) and scoring information importance and density.
- SCURank achieved the highest mean score on five of six automatic metrics among ranking baselines on CNN/DailyMail. Compared with GPTRank, distilled students received higher mean human ratings across all three dimensions on both datasets, with five of six comparisons statistically significant (paired t-test, $p < 0.05$).

Undergraduate Researcher **Sep. 2024–Jun. 2025**
BAISP Lab, National Cheng Kung University (Advisor: Prof. Hui-Ling Chan) *Tainan, Taiwan*

- Undergraduate capstone project (presented at iFUZZY 2025): combined harmonization (HACA3) with compact 3D-CNNs for multi-site Alzheimer's classification on ADNI.
- The resulting models converged faster and achieved higher AUC while using fewer parameters.

Teaching & Leadership

NLP Group Leader **Sep. 2025–Jun. 2026**
GDG on Campus, National Cheng Kung University *Tainan, Taiwan*

- Led 5–15 students: taught six NLP classes and guided a RAG chatbot for NCKU's Office of International Affairs LINE channel.

Languages

Mandarin Chinese (native), **English** (IELTS Academic: 7.0)
